

Boston Technologies RSS News Feeder

The RSS to News Feeder enables the manager to supply up-to-date, real time news updates to clients via the built in [MetaTrader 4](#) news feeding mechanism. The feeder can be pointed at any existing RSS feed (available publicly and at no cost from almost every major media outlet), or a custom feed created by the broker providing an enhanced trading experience for the client.

Setup of the feeder is very simple. The feeder requires the server information and the feed URL. From the MT4 side, one must only install the standard (free) unifeeder source and link it to a manager account.

Time	Headline
2008/02/21 08:57:00	Euro Down Versus Franc, Gains Against Rest Of Majors Ahead Of Euro-zone Data

2008/02/21 09:12:00	Tomkins Q4 Profit Down; Revenue Declines 3.6%- Update

Terminal | Trade | Account History | **News** | Alerts | Mailbox | Journal |

Maintenance is virtually unnecessary. The feed automatically forwards news items every time the RSS feed is updated. If for some reason it cannot connect to the server or feed, it logs the issue and retries.
