

# Boston Technologies NPV Client

---

The NPV Client allows traders with multiple trades on a single currency to quickly view their net trade and profit/loss. For example, if a trader has thirty different trades open on EURUSD, it would be difficult to quickly calculate whether he or she is long or short. Our plug-in calculates this and updates the trader every 10 seconds. This is especially convenient when expert advisors are being used to take certain positions and are making trades automatically.

---

## MetaTrader 4 currently:

In the current version of [MetaTrader](#), each trade is a different line. If you open 30 buys and 30 sells you don't know if you are long, short, or flat overall for that currency unless you manually add the volumes and the prices.

## With the Add-On:

For each pair which has open trades, the trader can see in 1 line if he is long, short, or flat, the average price, the total volume, and the total profit/loss he is seeing in that very moment for that position.

Symbol	AvPrice	Profit	Volume	Side
EURUSD	1.48907	225.00	5.00000	LONG
GBPJPY	223.42890	272.32	-8.00000	SHORT
GBPUSD	2.06950	-45.00	1.00000	LONG
USDCAD	.99550	175.88	3.50000	LONG
EURJPY	161.33580	50.54	5.70000	LONG
AUDUSD	.87704	415.00	-7.60000	SHORT
USDCHF	1.10459	342.08	14.20000	LONG

## How to purchase the NPV Client:

Boston Technologies is offering this add on in two ways:

1. Any single trader can license this add-on for \$99, a one-time fee.
2. A broker can license this add on for all his customers for a monthly fee. For pricing please contact our sales department at [sales@bostontechnologies.com](mailto:sales@bostontechnologies.com).
